Standard Bridge Cranes

# the group...

OMIS is in Sandrigo, a town in the north of the province of Vicenza, located in the centre of one of the most important regions in the whole of northern Italy for its technology and production capacities. In fact, in this particular area, there are many important manufacturers of machinery, advanced industrial installations and highly sophisticated components. This is a working environment where new technologies live in harmony with a traditional and well-rooted concept of enterprise. In this productive context OMIS has been working since 1967 with a continuous growth not only on the national market in Italy, but abroad as well.

The OMIS group includes 6 companies, 150 employees, 22 sales representatives, 50.000 sq. m of premises, 400 kits per year for manufacturing standard bridge cranes and over 1.300 standard and special bridge cranes.

The OMIS group is not only proud of the quality of its products, but also for its growth and working capacities that were officially recognised in 1994 when OMIS SPA and OMIS SERVICE received for the quality of their products the in-house ISO 9000 QUALITY SYSTEM CERTIFICATION.

Production covers standard single and double girder bridge cranes fitted out with trolley mounted hoisting units, winch or hoist, that can vary in capacity from 1 to 20 tonne, with working spans up to 25 m. Both the quality and reliability of OMIS bridge cranes are directly linked to specific production choices, which have led the company to invest a considerable amount in updating and renewing machinery and installations, as well as its production structure.

The new premises are equipped with the most recent innovative technologies in welding and machining. Total automation in the factories, robot welders and automatic paint lines, all offer a precise and constant quality in each product.

5 tonne double girder crane  
13 metres span. In the back -  
ground 3,2 tonne single girder  
crane with low headroom.
